# Faik Kerem Örs

fkerem@sabanciuniv.edu | fkerem.github.io | linkedin.com/in/keremors | github.com/fkerem

#### EDUCATION

Sabancı University

Istanbul, Turkey

M.Sc. in Computer Science and Engineering

Sep. 2019 - Jan. 2022

CGPA: 3.87/4.00, Thesis Advisor: Prof. Albert Levi

Thesis: Data Driven Intrusion Detection for 6LoWPAN Based IoT Systems

Sabancı University

Istanbul, Turkey

B.Sc. in Computer Science and Engineering, Minor in Mathematics

Sep. 2014 - June 2019

CGPA: 3.86/4.00, Ranked 3rd

Research Interests

IoT/CPS security and privacy; wireless network security; systems and software security; privacy of machine learning applications; adversarial machine learning.

## RESEARCH EXPERIENCE

Research Intern

June 2020 – June 2021

Purdue University - GoBoiler Internship Program (Selected Attendee)

West Lafayette, IN, USA

- Implemented a secure and robust context-based sensor pairing scheme in the smart home context.
- Implemented the signal processing module and extracted the time series features in Python.
- Submitted to IEEE S&P (Oakland) 2022, second cycle.
- Worked remotely due to COVID-19 circumstances under the supervision of Dr. Z. Berkay Celik.

#### Summer Research Intern

June 2018 – Sep. 2018

Technical University of Berlin

Berlin, Germany

- Implemented deep learning models (LSTMs) to optimize the bitrate selection decision on DASH clients.
- Reviewed the literature and delivered an overview presentation on Dynamic Streaming over HTTP (DASH).
- Attended M.Sc. lectures and seminars especially on content delivery techniques.
- Supervisors: Dr. Suzan Bayhan and Prof. Abdel-Karim Al-Tamimi

#### Publications

- Faik Kerem Örs, Mustafa Aydın, Aysu Boğatarkan, and Albert Levi. Scalable Wi-Fi Intrusion Detection for IoT Systems. In 11th IFIP International Conference on New Technologies, Mobility and Security (Security Track), Paris, France, April 2021.
- Faik Kerem Örs, Süveyda Yeniterzi and Reyyan Yeniterzi. Event Clustering within News Articles, In *Proceedings* of the Workshop on Automated Extraction of Socio-political Events from News 2020, pages 63–68, Marseille, France, May 2020. European Language Resources Association (ELRA). (Proposed system ranked 1st in the shared task).

#### Conference Presentations

- Scalable Wi-Fi Intrusion Detection for IoT Systems. In 11th IFIP International Conference on New Technologies, Mobility and Security (Security Track), Paris, France, April 2021.
- Event Clustering within News Articles, In *Proceedings of the Workshop on Automated Extraction of Socio-political Events from News 2020*, pages 63–68, Marseille, France, May 2020. European Language Resources Association (ELRA).

## TEACHING EXPERIENCE

## Teaching Assistant

Feb. 2018 – Present

Istanbul, Turkey

Sabancı University

- Held office hours, conducted lab sessions and supervised student projects and assignments.
- Courses (reverse chronological): Computer Networks (CS 408; 2022, 2021, 2020), Computer and Network Security (CS 432), Machine Learning (CS 412), Advanced Programming (CS 204), Database Systems (CS 306)

1 of 2

## SERVICES

- Reviewer in ITU Journal on Future and Evolving Technologies (ITU J-FET) 2022
- Reviewer in IEEE International Conference on Communications (ICC) 2022
- Reviewer in IEEE Conference on Communications and Network Security (CNS) 2021
- Reviewer in The Computer Journal (Oxford University Press) 2020, 2021

# Honors and Awards

- Full tuition waiver and stipend by Sabanci University for graduate studies (2019 2021).
- Dean's High Honor List, Sabancı University (2016 2019).
- Recipient of Sakıp Sabancı Encouragement Scholarship, which covers 100% of tuition fee, because of academic excellence (2016 2019).

#### TECHNICAL SKILLS

Programming Languages: Python, C++, C, C#, Java, SQL

Frameworks and Libraries: Pandas, NumPy, Scikit-learn, Keras, PyTorch (basic), Tensorflow (basic), Flask, Django

Operating Systems: Unix, Linux, Windows

Technologies: git, MySQL, PostgreSQL, Docker, Azure, JUnit, Android Studio

Tools: Wireshark, Metasploit, Hashcat, Burp Suite, Nmap, SQLmap, Wfuzz, IDA, Binwalk, The Harvester, Dirbuster

## Additional Work Experience

## R&D Engineer

Feb. 2019 – Aug. 2019

PRODAFT Cyber Intelligence and Cyber Security Services

Istanbul, Turkey

- Implemented a machine learning based phishing detection system from scratch.
- Developed RESTful microservices to be integrated into the threat intelligence ecosystem of the company.

#### Security Research Intern

July 2017 – Sep. 2017

PRODAFT Cyber Intelligence and Cyber Security Services

Istanbul, Turkey

• Worked on penetration testing and developed penetration testing tools in Python.

#### Selected Projects

#### Wi-Fi Intrusion Detection for IoT Systems

Dec. 2019 – June 2020

- Implemented a machine learning based Wi-Fi intrusion detection system using the network traffic data collected from IP cameras.
- Our multiclass classifier that detects 6 attack types achieved 96.85% test accuracy.

### Commonsense Validation and Explanation

Oct. 2019 – Feb. 2020

- Applied state-of-the-art transformer-based NLP models (e.g., BERT, ALBERT and RoBERTa) on the commonsense validation and explanation task (Task 4) conducted as part of SemEval 2020.
- My model that utilizes pre-trained ALBERT has been ranked 11th out of 39 submissions officially.

## Neural Online Signature Verification System

Oct. 2019 – Feb. 2020

- Implemented an online signature verification system leveraging siamese networks on SUSIG database.
- Our model achieved 94% accuracy on the test set that consists of 450 genuine, 1000 skilled forgery and 900 random forgery signatures which were tested against the reference signatures in the form of an input pair.

#### Intrusion Detection for 6LoWPAN Based IoT Systems – Bachelor's Thesis

Sep. 2018 – May 2019

- Implemented and simulated three types of RPL routing attacks (flooding, sinkhole and blackhole) on top of 6LoWPAN protocol stack using Contiki operating system.
- Implemented a machine learning model that detects malicious nodes which realize the aforementioned routing attacks in different experimental settings (e.g., co-presence of different attack types, different sensor placements).
